

Environmental, Health and Safety Policy

Animal Welfare in Testing and Research Global Policy

Applicability This policy applies to all 3M operations and supported research.

Introduction 3M is obligated to ensure that its products are effective and safe. At present, this requires the judicious use of laboratory animals in research and development of some products. 3M looks forward to the day when science has developed to the point where the use of animals no longer is required to establish the efficacy and safety of its products. Until then, 3M is committed to the use of alternatives to animals when feasible and subscribes to the recognized principles of replacement, reduction and refinement¹. When animal studies are deemed necessary, there must be effective programs to ensure: animals are treated humanely, ethically, and in accord with accepted veterinary practices and to provide enrichment measures to promote their comfort and physical and psychological well-being; their use is scientifically justified; and their care and treatment are carefully scrutinized by an effective institutional animal care and use review process. One recognized means for demonstrating commitment to and achievement of a high quality animal care and use program is through accreditation by the Association for Assessment and Accreditation of Laboratory Animal Care, International (AAALAC).

Policy Statement 3M will not knowingly conduct unnecessary studies involving the use of laboratory animals. When testing or research activities involving the use of laboratory animals are conducted or sponsored by 3M, the involved programs and facilities must meet or exceed all applicable standards and regulations governing the care and use of animals in research and testing as determined by the company's review process. .

3M's internal animal care and use programs and facilities will comply with all applicable governmental statutes and regulations relating to the care and use of animals in research and testing and maintain accreditation by AAALAC.

3M will only use contract research organizations (CRO) that have been evaluated and approved through our internal review process to ensure compliance with all applicable governmental statutes and regulations relating to the care and use of animals in research and testing and the standards of care set out in the introduction above. The review process requires United States based CROs to act in compliance with the Animal Welfare Act (7 USC §2131) and in a manner consistent with the National Research Council *Guide for the Care and Use of Laboratory Animals*.
