

3M Veterinary Intensifying Screens and Cassettes

3M X-ray Cassettes

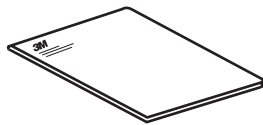

Light and Durable!

Hardback Cassettes

The cassette is critical in achieving quality radiographs consistently, year after year. 3M hardback cassettes are precisely designed and engineered to guard against the loss of screen-film contact and light leaks that degrade image quality. This premium cassette is light and easy to use for high productivity from start to finish. The 3M hardback cassette is built tough for long, reliable service to meet the unique challenges of veterinary radiography.

3M Hardback Cassette

3M Vinyl Cassette

Vinyl Cassettes

The 3M™ Vinyl Cassette is the lightweight alternative to conventional hardback cassettes. Specifically designed with the equine practitioner in mind, the 3M Vinyl Cassettes are easy-to-use for a multitude of radiographs at remote locations. Vinyl cassettes must be used with a 3M™ Contact Tunnel to maintain film/screen contact and image integrity. Available in 8x10 inch size only.

3M Rare Earth Screens

3M™ Asymetrix™ Screens

Speed and Detail in one cassette!

With the veterinarian's unique needs in mind, 3M has designed a rare earth, green light emitting, synergistic asymmetric intensifying screen system.

The 3M Asymetrix screen optimizes both speed (faster screen) and detail (slower screen) in one cassette. The asymmetry of the screens creates a *synergy* that equalizes the quantity of light emitted from each screen and allows for the imaging of both soft tissue and trabecular bone on one radiograph. 3M Veterinary X-ray screens provide the best-of-two-worlds in one cassette!

The Asymetrix Screen Options

3M Asymetrix Detail Screens

Designed for slower, detail radiography

- ◆ Equine: Recommended for High Frequency portable machines or greater
- ◆ Small animal: Excellent table-top radiography

3M Asymetrix Fast Detail Screens

Designed for faster radiography with detail

- ◆ Equine: Recommended for non-High Frequency portable x-ray machines
- ◆ Small animal: Ideal for radiography of large anatomy/grid (bucky) radiography
