

# Public Health Emergency Preparedness

## The SNS is on its way... Where are your *other* supplies?

An emerging challenge for public health professionals is to ensure that adequate supplies are available to set up and operate Point of Dispensing (POD) sites, protect staff, and quickly treat large numbers of patients during a public health emergency.

The logistics of storage and management of supplies are keys to an effective response. The foundation of a good logistics plan is understanding the demand for supplies, which is primarily driven by the level of surge and the duration of need.

The CDC's Strategic National Stockpile (SNS) contains vaccines, pharmaceuticals and supplies that will be crucial to operating a successful POD. You can supplement these with additional supplies to help maximize the safety and throughput of your POD.

The 3M™ Demand Planner for Point

Dispensing is an interactive planning tool designed to help you make critical decisions, using your inputs, about the type and quantity of supplies you think will be needed to set-up and operate your POD sites. Utilizing your data and selection of supplies, this tool helps provide insight into your current readiness levels while enabling planning for future purchases and funding.

In addition to the tool, 3M has a wide variety of emergency preparedness products in the areas of Planning, Command & Control, Staff Protection & Training, Site Readiness, POD Operation, and Site Cleaning & Restoration.

For a demonstration of the tool please contact your 3M Representative or if you are ready to purchase supplies, an authorized 3M distributor can process your order and arrange delivery to your site.
