

3M™ Ultimate 2000 Veterinary X-ray Film

*The highest over/under exposure tolerance
in veterinary medicine ...*

Finally a Forgiving Film!

3M Innovation

3M™ Ultimate 2000 Veterinary X-ray Film

The latitude you want, the resolution you need

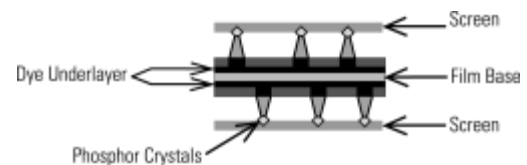

At 3M Animal Care, we understand the challenge of taking radiographs quickly, easily and effectively. Whether you're evaluating an injured dog or doing pre-purchase exams in the sale barn, you need to know that your first film is the only one you'll need. And, given the high costs of running your own veterinary business, you simply can't afford the time and the expense of multiple retakes.

3M™ Ultimate 2000 Veterinary X-ray film is the one brand of film your practice can't afford to be without. Whether you're using your portable X-ray machine in the barn or in the clinic, 3M™ Ultimate 2000 minimizes the effects of patient motion to deliver a perfect radiograph every time. This state-of-the-art, green-sensitive, high speed, medium contrast double emulsion film utilizes an exclusive dye underlayer to deliver maximum detail for a precise evaluation with minimal exposure. No matter how many patients you see in a day, you'll find that 3M™ Ultimate 2000 is so precise, so consistent and so reliable, you'll only need to take one film for each view -- and only one brand of film for your veterinary practice.

Depend on 3M™ Animal Care Products to reduce your X-ray costs
