

## **No-Drill Installation Saves Time and Preserves OEM Warranty Rear Window Air Deflectors From Midwest Molding**

Midwest Molding, Inc., of Wolcottville, Indiana, presents its Armawind® Rear Window Air Deflectors, now attached solely with 3M™ Acrylic Foam Tape. The Armawind, recently acquired from Accent Appearance Products, was previously attached with bolts and screws.

According to company president, John Rehkopf, “the mechanical attachment system used formerly to install this product was labor-intensive, taking from two to three hours to install. By switching to double-sided 3M acrylic foam tape, we’ve created a superior product that can be installed in about 15 minutes, without worry of drilling into Class A surfaces – jeopardizing OEM warranties.”

Midwest Molding’s Armawind air deflector channels roof wind over the rear window for excellent visibility. The design maintains the vehicle’s styling lines while adding a customized touch.

“The previous screw attachment method for this product made it impractical for use on leased vehicles, but the new tape attachment system allows the product to be removed without a problem,” said Rehkopf. “In this way we have addressed the growing popularity of leased vehicles.”

Midwest Molding’s Armawind air deflector is made of a durable fiberglass/resin composite. The deflector comes painted mat black and is base clear coat compatible and ready to mount. It can also be custom-ordered to match a vehicle’s paint color.

Midwest Molding, Inc. has been in business since 1978 selling fiberglass and vacuum-molded after-market accessories to the truck, van and SUV market. John Rehkopf manufactured the original rear spoiler for the 1969 Pontiac Judge – the first polyester production spoiler ever made.
